Identificativo proposta: TRCN20191012001 **RICHIEDI MAGGIORI INFORMAZIONI**

A Chinese company engaged in the smart transportation industry is looking for a technology partner from Finland that can further improve the performance of their smart transportation solutions and services through a technical cooperation agreement.

Established in 2012 in Nanjing with a registered capital of 20 million RMB, the Chinese company is specialized in key technology studies and core software development for smart transportation industry, and provides professional application solutions and services for transportation management departments, transportation supervision departments, and urban transportation planning departments, which consists of professional solutions, technical consultation and operational services outsourcing. Its main products/services include an urban road traffic management platform, transportation industry supervision and an emergency command platform, as well as a traffic planning and decision-making assistant platform. The company would like to look for a technology partner from Finland to further improve the performance of their smart transportation solutions and services. The ideal partner from Finland should have expertise in the fields of intelligent transportation system and traffic flow analysis, big data analysis, image analysis, machine vision, and data visualization.
