[RICHIEDI MAGGIORI INFORMAZIONI](#)

The SME situated in south-east of Romania provides customized software services and developing applications and has developed a platform that allows the automation of processes in public or private companies. The platform is an innovation by using the techniques of Low code, robotic process automation and Machine learning. They are looking for partners for commercial agreement with technical assistance and joint venture.

The company from Romania has 8 years of experience in software development. Mainly, their activity is focused on building customized software solutions and developing applications based on artificial intelligence. The company has developed a platform that allows the automation of processes in public institutions or private companies using low code technologies, workflow and artificial intelligence modules. In the current economic and social context, the platform that they have developed, is useful for companies and institutions to digitize their services or internal processes with low costs and shortest delivery times. The requirement to automate processes appeared from necessity to adapt to the new changes from society. This type of application can simplify various processes, such as: - document management - workflow automation - activity alerts by e-mail - payment reminders - reviewing and approving documents - managing employee requests. This software comes in support of economic agents or any other type of organization. At the same time, organizations / companies / institutions will be able to define the workflow it wants to manage with details on operations specific to the activity, this platform also having the ability to manage time consuming tasks, thus optimizing specific operations. Proposed solution allows to high level users to look up to crucial data instantly, keep track of processes and tasks, streamline them for optimal productivity. The company is looking for partners for commercial agreement with technical assistance offering also training, support, mentoring and expert consultation. They are also looking for partners for joint venture, willing a collaboration in order to create a new company for chance to have access to a greater market, have more resources and widen their capacity.
