RICHIEDI MAGGIORI INFORMAZIONI

A Romanian ITC company is specialized in designing customized software solutions for many industries. The company developed an application for tracking and planning services provided in the medical field, which is intended for monitoring the activity of medical staff as well as archiving statistical data related to patients. The company is looking for health facilities for license agreement or suppliers from healthcare sector for commercial agency agreement.

The Romanian company has experience in designing customized solutions for many industries, based both on applications such as ERP (Enterprise Resource Planning), WMS (Warehouse Management System), BI (Business Intelligence), as well as on a suite of own applications developed for various fields of activities. Telemedicine was initially created as a way to treat patients who were located in remote locations, away from local health facilities or in areas with deficiencies of medical professionals. Today's connected patient wants to spend less time in the doctor's waiting room and receive immediate care for minor conditions or emergencies when they need to. At the same time, telemedicine is the only tool that medical units can use in case of crisis, thus protecting doctors and patients. The company developed a solution which was designed to be easy to use by doctors in medical clinics and for the patients to have a quick way to get in touch with doctors directly from their phone / laptop. As it is a web based solution, it can be accessed from any device that has access to internet. It was designed to cover a wide variety of healthcare providers. Main benefits: Connect patients with medical specialists; Improves the quality of patient treatment; The consultation is saved in the medical history and you have access to the medical report at any time; Prevents complications in case of an emergency, through quick assistance; Increases the addressability of the health unit; Cancel distances thus reducing time and money; It allows the administrators of the medical unit to quickly manage the activity of doctors; It is available on phone, tablet and computer (which have internet access and video camera). The solution is already used in UK and now the company is interested to enlarge the international presence. Is sought collaboration with suppliers from healthcare sector who are seeking to increase their portfolio, based on commercial agency agreement. Also, health facilities like individual cabinets and clinics for one specialization or with more specializations are sought for licensing agreement. The partners can benefit by fully implementation, solution configuration, external training, solutions integrations, updates, maintenance and support.
