RICHIEDI MAGGIORI INFORMAZIONI

A Russian company from Moscow develops innovative and non-standard IT solutions. The company offers a multifunctional platform for managing the infrastructure of a residential complex and implementing user services of the "smart home" class. The company is interested in finding foreign partners in order to conclude a license agreement.

The Russian company from Moscow was founded in 2006. The company is a leader in the production of non-standard IT technologies and platforms. With extensive experience, the company has developed more than 300 different programs for Russian and foreign companies. The company has its own workspace with the best developers and programmers of the country. The company's specialists are highly qualified and annually receive a new level of their knowledge. The Russian company has developed a multifunctional digital platform for managing the infrastructure of a residential complex and implementing user services of the "smart home" and "smart city" class based on Internet of Things technologies. It is an open cloud platform that provides interaction of terminal devices, services and users. The core of the integration subsystem of the platform is a distributed, scalable software solution for storing and semantic integration of heterogeneous data for their processing. This platform combines all the services in the house. Organization of effective interaction of residents, commercial and communal structures, as well as the development of the service environment reducing the cost/costs of services due to the effect of the platform. The platform provides the possibility of continuous collection, analysis and secure storage of large amounts of data of various nature (including spatial, multimedia, etc.) obtained from various software and hardware sources. The platform also provides collection, storage and processing of metadata of technical devices and services that characterize the features of installation, operation and configuration of these devices or services to support the procedures of intelligent analysis and automation of operational activities. The actions of this platform are possible both in an apartment, a house, an entrance, an area. This platform is multifunctional and suitable for housing and communal services providers and for companies working in the housing and utilities sector and service providers, based on the analyses and forecasts, will be able to effectively build a business strategy. Platform solutions are suitable for residential users and for creating analytical reports for government agencies. This platform is implemented in any language. The Russian company is looking for foreign partners from housing and communal services, from the IT sector to conclude a license agreement. As a result of this agreement, the Russian company will grant the right to use the platform to the partner. All actions will be controlled by the developers. The Russian company will also be able to make and change the functionality of the platform at the request of the partner. The purpose of this agreement is for the Russian company to conclude long-term agreements with foreign partners, to help in the development of IT platforms on the market.
