[RICHIEDI MAGGIORI INFORMAZIONI](#)

A recently founded Spanish start up that has developed an innovative medical software looks for commercial agents with a deep knowledge of the medical channels, both private and public, to introduce its unique Computational Fluid Dynamics (CFD) analysis tool for otorhinolaryngology (ENT) in Italy, France, Germany and UK. Licence agreements will also be offered. The software offers a 3D model patient and is ready to help ENT specialists to improve daily medical diagnosis and nasal surgery.

Fast-growing Spanish start up founded recently and linked to the Polytechnic University of Cartagena, has developed a medical software to help the otorhinolaryngology (ENT) specialist on a daily basis to improve medical diagnosis and nasal surgery by providing objective and quantitative information on the patient's nasal pathology on the one hand, and by predicting surgical results through virtual surgery techniques on the other. The modular nature of the software makes it extremely versatile. Thanks to the in-house development of the different modules implemented in the software, both medical specialists and computational fluid dynamics (CFD) researchers can tackle the analysis and study of the behavior of air in anatomical structures with full guarantees. To continue with the growth and expansion, the Spanish company is looking for license agreements or commercial agents with knowledge of the medical market to promote and sell the software among ENT specialists, private and public hospitals, CFD research teams and medical universities. The objective is to introduce the product in the German, Italian, French and British markets through local partners.
